- GENERAL NOTES (ALL NOTES ON THIS PAGE APPLY TO ALL MECHANICAL SHEETS U.O.N.) DRAWINGS ARE DIAGRAMMATIC. DRAWINGS ARE NOT INTENDED TO BE ABSOLUTELY PRECISE, AND DO NOT SPECIFY OR SHOW EVERY OFFSET, FITTING, AND COMPONENT. THE PURPOSE OF THE DRAWINGS IS TO INDICATE A SYSTEM CONCEPT, THE MAIN COMPONENTS OF THE SYSTEMS, AND THE APPROXIMATE GEOMETRICAL RELATIONSHIPS. BASED ON THE SYSTEMS CONCEPT, THE MAIN COMPONENTS AND APPROXIMATE GEOMETRICAL RELATIONSHIPS, THE CONTRACTOR SHALL PROVIDE ALL OTHER COMPONENTS AND MATERIALS NECESSARY TO MAKE THE SYSTEMS FULLY COMPLETE AND OPERATIONAL. THE CONTRACTOR SHALL ROUTE PIPING OR PROVIDE OFFSETS TO AVOID INTERFERENCE WITH STRUCTURAL ELEMENTS, EQUIPMENT, ELECTRICAL PANELS AND JUNCTION BOXES, ETC. VERIFY LOCATIONS, DIMENSIONS, EXISTING FLOW DIRECTIONS, AVAILABLE POWER CHARACTERISTICS (VOLTS/PHASE), ETC., BEFORE CONSTRUCTION.
- WORKMANSHIP: COMPETENT SKILLFUL WORKMEN SHALL DO ALL WORK IN A FINISHED. THOROUGHLY SUBSTANTIAL AND CRAFTSMANLIKE MANNER. THIS IS INTENDED TO REFER PARTICULARLY TO SMALLER DETAILS NECESSARY BUT USUALLY NOT SPECIFIED OR INDICATED ON THE DRAWINGS. ALL SUB-STANDARD WORK, INSTALLED BY THIS CONTRACTOR, SHALL BE REPLACED BY THIS CONTRACTOR AT NO ADDITIONAL EXPENSE TO THE OWNER. IF THIS CONTRACTOR DAMAGES EXISTING WORK, HE SHALL PAY THE COST OF REPLACEMENT OF THE DAMAGED WORK AT NO ADDITIONAL EXPENSE TO THE OWNER. THE ENGINEER SHALL BE THE JUDGE OF WORKMANSHIP AND HIS/HER OPINION SHALL BE FINAL.
 - THE DESIGN DOCUMENTS INDICATE THE PRODUCTS THAT WERE USED AS THE BASIS OF THE DESIGN. THIS ESTABLISHES THE PRODUCT PARAMETERS AND OTHER SYSTEMS INTERACTING WITH THE PRODUCT (SIZE, POWER REQUIREMENTS, PIPE SIZES, PUMP CAPACITY, ETC.). CONTRACTOR SHALL SPECIFICALLY BRING TO THE DESIGNER'S ATTENTION ANY CHANGES IN OTHER SYSTEMS REQUIRED WHEN PRODUCTS, OTHER THAN THOSE USED AS THE BASIS OF THE DESIGN, ARE USED. THE CONTRACTOR SHALL BEAR ALL COSTS, INCLUDING DESIGN, FOR THE CHANGES.
- THE CONTRACTOR SHALL VERIFY EXISTING CONDITIONS, DIMENSIONS AND SIZES BEFORE FABRICATING OR ORDERING EQUIPMENT.
- REPAIR AND PATCH ALL (NEW AND DEMOLISHED) WALL AND FLOOR PENETRATIONS TO MATCH EXISTING FINISH. REPAIR AND PATCH ALL CONCRETE FLOORS, SLABS OR ASPHALT PAVING TO MATCH EXISTING FINISHES WHERE EQUIPMENT, SLABS OR SUPPORTS ARE REMOVED. SEAL ALL PENETRATIONS OF FIRE RATED WALLS/FLOORS IN ACCORDANCE WITH UL SPECIFICATIONS. REFER TO DRAWINGS FOR WALL RATINGS, TREAT ALL FLOORS AS TWO HOUR RATED.
- DUCT LINER SHALL ONLY BE INSTALLED WHERE SPECIFICALLY NOTED. SEE DETAIL SHEETS. WHEREVER LINED DUCT IS CUT OR TAKEN APART LEAVING A RAW EDGE ON THE DUCT LINER, AND THIS DUCT IS TO CONTINUE IN USE, THE RAW EDGES OF THE DUCT LINER SHALL BE SEALED WITH ADHESIVE MADE FOR THIS PURPOSE, OR WITH METAL NOSING.
- SUPPORT ALL PIPING FROM BUILDING STRUCTURE, FLOOR OR PAVEMENT. REFER TO SPECIFICATION SECTION PERTAINING TO "SUPPORTS, ANCHORS AND VIBRATION ISOLATION", AND DETAIL DRAWINGS FOR REQUIREMENTS.
- LABEL ALL EQUIPMENT, DUCTS, ETC. IN ACCORDANCE WITH SPECIFICATIONS.
- PROVIDE MAGNETIC TYPE WARNING TAPE IN THE BACKFILL OF ALL PIPE TRENCHES. INSTALL AT LEAST 6 INCHES BELOW GRADE.
- AFTER COMPLETION OF CONSTRUCTION, TEST AND BALANCE THE AIR DISTRIBUTION SYSTEMS TO THE FLOW VALUES INDICATED IN THE PLANS. A TEST AND BALANCE REPORT SHALL BE SUBMITTED AND ANY DISCREPANCIES SHALL BE NOTED AND BROUGHT TO THE ATTENTION OF THE ENGINEER. SEE SPECIFICATION SECTION PERTAINING TO "TEST AND
- UNLESS OTHERWISE NOTED, ALL MECHANICAL EQUIPMENT SHALL BE MOUNTED ON 4" THICK, 3000 PSI CONCRETE HOUSEKEEPING PADS, MINIMUM 4" LARGER THAN EQUIPMENT ON EACH SIDE. OUTSIDE PADS TO BE 6" THICK AND PROVIDED BY G.C.
- THE DELINEATION OF THE WORK BETWEEN THE MECHANICAL AND THE ELECTRICAL CONTRACTORS SHALL COMPLY WITH THE REQUIREMENTS ESTABLISHED BY THE NC STATE CONSTRUCTION OFFICE. REFER TO SCHEMATIC TITLED "MECHANICAL/ELECTRICAL EQUIPMENT CONNECTION" ON SHEET M501.
- PROVIDE FIRE DAMPERS WHERE INDICATED ON THE DRAWINGS. REFER TO FLOOR PLANS FOR LOCATIONS AND RATINGS OF FIRE RATED WALLS. CONSIDER ALL FLOORS TO BE TWO-HOUR RATED. SEE DETAIL SHEETS FOR INSTALLATION DETAILS.
- REFER TO PLANS, EQUIPMENT SCHEDULES AND DETAILS FOR CAPACITIES AND ADDITIONAL REQUIREMENTS.
- INSTALL ALL EQUIPMENT IN COMPLIANCE WITH MANUFACTURER'S WRITTEN RECOMMENDATION AND REQUIREMENTS. IF RECOMMENDATIONS CONFLICT WITH DRAWINGS, REQUEST CLARIFICATIONS FROM ENGINEER BEFORE PROCEEDING.
- CONTRACTOR SHALL BE RESPONSIBLE FOR SAFETY AT THE SITE. PROVIDE BARRICADES AND COVERS AT THE EXCAVATION AREAS AS APPROPRIATE. COMPLY WITH SAFETY REQUIREMENTS OF OSHA, ETC. EXCEPT FOR INTERRUPTIONS SPECIFICALLY PERMITTED BY THE OWNER, VEHICULAR AND PEDESTRIAN TRAFFIC SHALL BE MAINTAINED AT ALL TIMES. COORDINATE WITH THE OWNER.
- FIELD-VERIFY EXISTING AND COORDINATE NEW EQUIPMENT SIZES WITH ASSOCIATED CONTRACTORS (ELECTRICAL, KITCHEN VENDORS ETC.) AFTER COMPLETION OF SHOP DRAWING REVIEW. ADJUST VOLTAGE RATING, CAPACITY AND SIZE OF WIRING, STARTERS, DISCONNECT SWITCHES AND OVERCURRENT PROTECTION DEVICES AS REQUIRED. NOTIFY ENGINEER OF ANY DISCREPANCIES BEFORE ORDERING SUPPLIES AND START OF CONSTRUCTION. FAILURE TO COMPLY WILL REQUIRE THE CONTRACTOR TO BEAR THE COST FOR CORRECTLY SIZED EQUIPMENT AND WIRING.
- 18. THE DDC CONTROL CONTRACTOR SHALL RUN THE POWER WIRING TO ALL DAMPER ACTUATORS. THE ACTUATORS ARE TO BE 24V. REFER TO SPECIFICATIONS.
- THE MECHANICAL CONTRACTOR SHALL INSTALL THE DUCT SMOKE DETECTORS PROVIDED BY THE ELECTRICAL CONTRACTOR.
- EQUIPMENT SHALL BE INSTALLED WITH MANUFACTURERS RECOMMENDED SERVICE CLEARANCES OR STATE BUILDING CODE SERVICE CLEARANCES WHICHEVER IS GREATER.
- ALL EXTERIOR PIPING WHICH CARRIES WATER ABOVE GRADE SHALL BE HEAT TRACED, INSULATED, COVERED WITH ALUMINUM JACKET, AND SHALL BE SLOPED TO DRAIN WITH NO LOW POINT POCKETS.
- WHERE DUCTS ARE SHOWN GOING THROUGH A WALL OR THE ROOF THEY SHALL GO BETWEEN STUDS, JOISTS OR BEAMS. NO TRUSSES, BEAMS, STUDS, COLUMNS OR OTHER STRUCTURAL MEMBERS ARE TO BE CUT WITHOUT PRIOR APPROVAL OF THE ENGINEER. NEW OPENINGS FOR DUCTS SHALL BE SAW CUT. NEW OPENINGS FOR PIPES SHALL BE CORE
- THIS IS TO BE A PREFABRICATED METAL BUILDING, THE MECHANICAL CONTRACTOR SHALL COORDINATE WEIGHTS AND LOCATIONS OF THE EQUIPMENT TO BE HUNG FROM THE STRUCTURE AND WALL OPENINGS, WITH THE G.C.
- THE BUILDING MECHANICAL SYSTEMS FOR THIS PROJECT WILL BE COMMISSIONED BY A COMMISSIONING AGENT. THE CONTRACTOR SHALL PROVIDE ALL MATERIAL AND RESOURCES NECESSARY TO ENSURE COMPLIANCE WITH THE REQUIREMENTS OF SPECIFICATION SECTION 01 91 13 – GENERAL COMMISSIONING REQUIREMENTS, AND WITH THE REQUIREMENTS OF THE COMMISSIONING PLAN.

ALTERNATES

BID ALTERNATE #1: CINEMA 1106 AND ITS SUPPORTING ROOMS (LIGHT LOCK 1105, LIGHT LOCK 1107, CORRIDOR 1108, PROJECTION BOOTH 1109, AND TEACHING AREA 1124) WILL BE BUILT AS SHELL SPACES IN THE BASE BID. PROVISION AND INSTALLATION OF SPLIT SYSTEM HEAT PUMP IDU1 AND ODU1 WILL BE INCLUDED IN BASE BID TO HELP TEMPER AND DEHUMIDIFY THE SPACE. TESTING AND BALANCING OF THE IDU1/ODU1 SYSTEM SHALL BE PART OF THE BASE BID. PROVISION AND INSTALLATION OF PACKAGED HEAT PUMP PHP3 AND RELIEF FAN EF-7 AND THEIR ASSOCIATED DUCTWORK, DAMPERS, DISCONNECTS, WIRING, CONCRETE PAD, DIFFUSERS, GRILLES, CONTROLS, ETC. SHALL BE PART OF BID ALTERNATE #1, TESTING AND BALANCING OF THE PHP3/EF-7 SYSTEM SHALL BE PART OF BID ALTERNATE #1.

ALL PROJECTS REQUIRE COORDINATION AND COOPERATION AMONG THE DISCIPLINES. CONTRACTORS SHALL COORDINATE LOCATIONS AND SEQUENCE OF INSTALLATION OF THEIR RESPECTIVE EQUIPMENT, PIPES, CONDUITS, DUCTS, ETC. WITH ALL DISCIPLINES. DO NOT BEGIN FABRICATION OR INSTALLATION UNTIL ALL ROUTING AND POTENTIAL CONFLICT ISSUES HAVE BEEN RESOLVED. ANY REMOVAL AND REINSTALLATION OF NEWLY INSTALLED ITEMS TO RESOLVE CONFLICTS SHALL BE DONE AT NO ADDITIONAL COST TO THE OWNER OR DESIGNERS.

MECHANICAL COVER SHEET

PROJECT NO: 2018070.01 DATE: 09/23/2019

DRAWN BY: JWS PROJ MGR:

As indicated

SCALE:

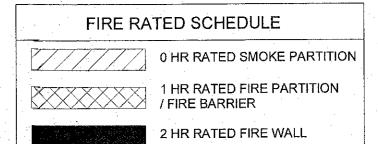

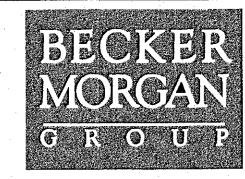

NOTES: 1. REFER TO SHEET M100 FOR GENERAL NOTES, LEGENDS, AND ABBREVIATIONS

- 2. REFER TO THE M500 SERIES FOR DETAILS AND TO M600 SERIES FOR EQUIPMENT SCHEDULES.
- DUCT DIMESIONS GIVEN ARE CLEAR INSIDE DIMENSIONS. WHERE ACOUSTIC DUCT LINER IS CALLED FOR THE SHEET METAL SIZES MUST BE ADJUSTED ACCORDINGLY. REFER TO NOTES ON THE DRAWINGS FOR LOCATIONS OF DUCT LINER (SOME ARE NOTED ON ENLARGED PLANS AND ELEVATIONS ON OTHER SHEETS). REFER TO DUCT LINER INSTALLATION DETAIL ON M501.
- 4. REFRIGERANT PIPING SHALL BE INSTALLED IN ACCORDANCE WITH THE REQUIREMENTS OF THE NORTH CAROLINA STATE BUILDING CODE: MECHANICAL CODE AND THE MANUFACTURER'S INSTALLATION INSTRUCTIONS. REFRIGERANT PIPING SHALL NOT BE RUN ABOVE OR THROUGH ANY EXIT ENCLOSURE. ALSO REFER TO SPECIFICATION SECTION 232300 REFRIGERANT PIPING AND SPECIALTIES.
- 5. LOUVERS SHALL BE FURNISHED BY THE MECHANICAL CONTRACTOR AND INSTALLED BY THE GENERAL CONTRACTOR. WHERE DAMPERS OR DUCTWORK ARE REQUIRED AT LOUVERS, THE MECHANICAL CONTRACTOR SHALL INSTALL THEM.
- 6. REFER TO THE ARCHITECTURAL PLANS FOR LOUVER INSTALLATION DETAILS.
- 7. REFER TO THE ARCHITECTURAL PLANS FOR A DETAIL OF HOW TO HANDLE A DUCT OR PIPE PENETRATION THROUGH AN EXTERIOR WALL.
- 8. SUPPORT ALL EQUIPMENT, DUCTWORK, AND PIPING FROM THE STRUCTURE OR THE FLOOR AS RECOMMENDED BY THE MANUFACTURER. CONCEAL DUCTS, PIPES, AND WIRING ABOVE CEILINGS WHEREVER CEILINGS ARE PROVIDED.
- 9. LOCKING VOLUME DAMPERS SHALL BE PROVIDED AT ALL DUCT TAKE-OFFS AND BRANCHES. LOCKING VOLUME DAMPERS ARE NOT ALL SHOWN ON THE DRAWINGS FOR CLARITY. AIR BALANCING SHALL BE PERFORMED USING DUCT VOLUME DAMPERS, NOT DAMPERS AT THE DIFFUSERS OR GRILLES.
- O. CONDENSATE DRAINS FOR AHU1, IDU1, AND AHU3 SHALL BE RUN ABOVE CEILINGS WHERE AVAILABLE, AND DROP TO BELOW GRADE WITHIN THE BUILDING. THIS VERTICAL PIPING SHALL BE CONCEALED IN WALLS. THE PIPES SHALL HAVE A MINIMUM OF 36" OF COVER WHERE THEY ARE RUN OUTSIDE THE BUILDING.

- ROUTE PUMPED CONDENSATE DRAIN FROM IDU4 TO JANITOR'S SINK IN HOUSKEEPING 1120. INCLUDE CHECK VALVE AFTER EACH PUMP.
- ROUTE PUMPED CONDENSATE DRAIN FROM IDU1 TO CLEAN OUT OUTSIDE OF BUILDING. INCLUDE CHECK VALVE AFTER PUMP.
- 4 AHU SHALL HAVE SECONDARY DRAIN PAN WITH MOISTURE SHUTOFF SWITCH.
- (5) TIE INTO CLEAN OUT PROVIDED BY SITE UTILITY CONTRACTOR. SEE SHEET C4.01 FOR CONTINUATION OF DRAIN.
- ROUTE CONDENSATE DRAIN FROM IDU2 AND IDU3 TO FLOOR DRAIN IN BLDG SERV. 1116. INCLUDE CHECK VALVE AFTER THE PUMP.
- SUPPLY DUCT SHALL BE DOUBLE WALL SPIRAL DUCT WITH THE INTERIOR OF THE 16" DIAMETER PORTION PERFORATED. RETURN DUCT SHALL BE DOUBLE WALL RECTANGULAR DUCT WITH INTERIOR PERFORATED. O.A. DUCT SHALL BE DOUBLE WALL RECTANGULAR WITH SOLID INTERIOR.
- PROVIDE DOUBLE WALL RECTANGULAR INSULATED DUCT WITH PERFORATED INTERIOR FROM ELBOW AT WALL TO THIS POINT.
- PROVIDE DOUBLE WALL INSULATED DUCTWORK WITH SOLID INTERIOR WALLS TYPICAL FOR SUPPLY TRUNK DUCTS IN THIS ROOM.
- BRANCH DUCTS MAY BE SINGLE WALL ROUND DUCT WITH NO MORE THAN 3' OF FLEXIBLE DUCT FOR CONNECTION TO LINEAR DIFFUSER PLENUM BOXES TYPICAL FOR THIS ROOM.
- SIX THEATRICAL LIGHTING GRIDS TO BE INSTALLED BELOW THE CEILING BY G.C. COORDINATE EXACT LOCATION OF DUCTWORK, DIFFUSERS, AND GRILLES TO AVOID INTERFERENCE WITH THE SUPPORTS FOR THIS GRID.
- WHERE CONDENSATE DRAIN PIPES PASS UNDER THE EDGE OF THE FOOTING (TURNED DOWN SLAB), PROVIDE A SCHEDULE 40 STEEL PIPE SLEEVE TWO PIPE SIZES LARGER THAN THE PIPE, EXTEND THE PIPE SLEEVE 1'-0" PAST EACH SIDE OF THE CONCRETE FOOTING. PROVIDE SPACERS INSIDE SLEEVE TO MAINTAIN SLOPE OF PIPE. FILL OR SEAL ANNULAR SPACE IN AN APPROVED MANNER. BACKFILL TRENCH WITH #57 STONE. THE BEARING CAPACITY OF THIS AREA MUST MEET OR EXCEED THE ALLOWABLE SOIL BEARING CAPACITY. COORDINATE WITH STRUCTURAL WORK.

KEYED NOTES:

- SUPPLY DIFFUSER TO BE APPROXIMATELY 9'-0" AFF IN CORNER TO AVOID ELECTRICAL PANELS.
 COORDINATE EXACT LOCATION WITH ELECTRICAL CONTRACTOR AND DO NOT INSTALL DIRECTLY OVER
 ANY ELECTRICAL PANEL.
- TRANSFER GRILLES TO BE INSTALLED DIRECTLY BELOW THE SUPPLY DIFFUSER AT APPROXIMATELY 12" AFF. COORDINATE EXACT LOCATION WITH ELECTRICAL CONTRACTOR AND DO NOT INSTALL DIRECTLY BELOW ANY ELECTRICAL PANEL.
- THESE THREE BRANCHES AND THEIR DIFFUSERS AND GRILLE ARE PART OF BID ALTERNATE #1.
- RUN 3/4" CONDENSATE DRAIN DOWN AGAINST WALL, TRANSITION TO 2" NEAR THE FLOOR, RUN OUT BELOW GRADE AS 2" TO JOIN THE CLEANOUT PROVIDED BY THE SITE UTILITY CONTRACTOR.
- RUN THE REFRIGERANT PIPING DOWN ALONG THE WALL AND OUT HORIZONTALLY ABOVE GRADE TO ODU1.
- PROVIDE 1" ACOUSTIC DUCT LINER FROM THIS POINT TO THE INTAKE OF EF-3.

ELEVATION VIEW RELIEF AIR SOUND STAGE

1 ELEVATION OF OUTSIDE DUCTWORK AND PACKAGED UNITS PHP1 AND PHP2

GENERAL NOTES

REFER TO DETAIL SHEETS FOR EXTERIOR DUCT INSULATION DETAIL AND OUTDOOR DUCT SUPPORT DETAIL. IN ADDITION TO DUCT BOARD ON THE OUTSIDE OF THE DUCT, PROVIDE 1" ACOUSTIC LINER FOR SOUND ATTENUATION IN ALL EXTERIOR DUCTS. DUCT DIMESIONS GIVEN ARE CLEAR INSIDE DIMENSIONS SO SHEET METAL SIZE MUST BE ADJUSTED ACCORDINGLY.

CONNECT SUPPLY AND RETURN DUCTS TO THE PACKAGED UNITS WITH FLEXIBLE CONNECTIONS.
 REFER TO DETAIL SHEETS FOR CONDENSATE DRAIN PIPING SCHEMATIC.

4. HEAT TRACE AND INSULATE CONDENSATE DRAINS FROM THE UNIT DISCHARGE TO WHERE THE CONDENSATE DRAIN GOES

ALL STEEL USED FOR SUPPORTING EQUIPMENT SHALL BE GALVANIZED WITH STAINLESS STEEL FASTENERS. OTHER MATERIAL RECOMMENDED BY METAL BUILDING FABRICATOR MAY BE USED IF APPROVED DURING SHOP DRAWING REVIEW.

KEYED NOTES:

SUPPORT DUCTS FROM CONCRETE SLAB USING GALVANIZED STEEL ANGLES, CHANNELS, OR UNISTRUT. BOLT THESE SUPPORTS INTO THE CONCRETE. TYPICAL FOR RETURN/RELIEF/SUPPLY DUCTS NEAR GRADE.

SUPPORT SUPPLY DUCTS FROM CONCRETE SLAB AND WALL STRUCTURE. COORDINATE WITH G.C. AND/OR METAL BUILDING FABRICATOR.

PROVIDE FLEXIBLE DUCT CONNECTION BETWEEN THE 16" x 16" RELIEF DUCT AND THE RELIEF FAN.

REINFORCE THE RELIEF AIR DUCT AND PROVIDE 4"x4"x1/4" ANGLE FRAME AT THE END OF THE RELIEF DUCT TO ACCEPT MOUNTING OF THE RELIEF FAN, SUPPORT THE RELIEF AIR DUCTWORK AND RELIEF FAN FROM THE CONCRETE SLAB UTILIZING 4"x4"x1/4" ANGLES.

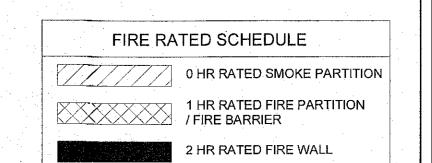

(5) INSTALL MOTORIZED DAMPER IN RELIEF DUCT PROVIDED BY CONTROLS CONTRACTOR.

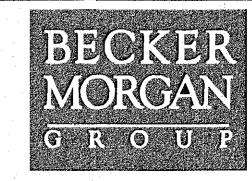

6 PROVIDE ACCESS DOOR ON THE BOTTOM OF THE DUCT FOR CHECKING THE BACKDRAFT DAMPER.

REFER TO ARCHITECTURAL DRAWINGS FOR DETAIL OF DUCT PENETRATION OF WALL, COORDINATE WITH G.C. TO PROVIDE WEATHERPROOF/SOLIND DEADENING SEAL

WEATHERPROOF/SOUND DEADENING SEAL.

PROVIDE UPSIDE-DOWN U-SHAPED RETURN/RELIEF DUCT WITH 1" ACOUSTIC LINER TO ABSORB SOUND. ENTIRE PATH FROM THE GRILLES TO THE FAN AND TO THE UNIT SHALL BE LINED. OUTSIDE OF DUCTS SHALL ALSO BE INSULATED WITH DUCT BOARD AND COVERED WITH ALUMINUM JACKETING. SUPPORT FROM CONCRETE SLAB AND WALL STRUCTURE. COORDINATE WITH G.C. AND/OR METAL BUILDING FABRICATOR.

PROJECT NO: 2018070.01 09/23/2019

12" = 1'-0" DRAWN BY: JWS PROJ MGR: IS

F Ratings -- 1, 2, 3 and 4 Hr (See Items 2 and 3)

T Ratings -- 0, 1, 2, 3 and 4 Hr (See Item 3) L Rating At Ambient -- less than 1 CFM/sq ft

L Rating At 400 F -- less than 1 CFM/sq ft

1. Wall Assembly — The 1, 2, 3 or 4 hr fire-rated gypsum wallboard/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300 or U400 Series Wall or Partition Designs in the UL Fire Resistance Directory and shall include the following construction features:

A. Studs — Wall framing may consist of either wood studs (max 2 h fire rated assemblies) or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 by 4 in. (51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.

B. Gypsum Board* — Nom 1/2 or 5/8 in. (13 or 16 mm) thick, 4 ft. (122 cm) wide with square or tapered edges. The gypsum wallboard type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual U300 or U400 Series Design in the UL Fire Resistance Directory. Max diam of opening is 26 in. (660 mm).

2. **Through-Penetrant** — One metallic pipe, conduit or tubing installed either concentrically or eccentrically within the firestop system. The annular space between pipe, conduit or tubing and periphery of opening shall be min of 0 in / (0 mm). (point contact) to max 2 in. (51 mm) Pipe, conduit or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes, conduits or tubing may be used:

A. Steel Pipe — Nom 24 in. (610 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

B. Iron Pipe — Nom 24 in. (610 mm) diam (or smaller) service weight (or heavier) cast iron soil pipe, nom 12 in (305 mm) diam (or smaller) or Class 50 (or heavier) ductile iron pressure pipe.

C. Conduit — Nom 6 in. (152 mm) diam (or smaller) steel conduit or nom 4 in (102 mm) diam (or smaller) steel electrical metallic tubing

D. Copper Tubing — Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing

E. Copper Pipe - Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

F. Through Penetrating Product* — Flexible Metal Piping The following types of steel flexible metal gas piping may be used:

1. Nom 2 in. (51 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

OMEGA FLEX INC

2. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly.

3. Nom 1 in. (25 mm) diam (or smaller) steel flexible metal gas piping. Plastic covering on piping may or may not be removed on both sides of floor or wall assembly

WARD MFG L L C

3. Fill, Void or Cavity Material* — Caulk or Sealant — Min 5/8. , 1-1/4,1-7/8 and 2-1/2 in. (16, 32, 48 and 64 mm) thickness of caulk for 1, 2, 3 and 4 hr rated assemblies, respectively, applied within annulus, flush with both surfaces of wall. Min 1/4 in. (6 mm) diam bead of caulk applied to gypsum board/penetrant interface at point contact location on both sides of wall. The hourly F Rating of the firestop system is dependent upon the hourly fire rating of the wall assembly in which it is installed, as shown in the following table. The hourly T Rating of the firestop system is dependent upon the type or size of the pipe or conduit and the hourly fire rating of the wall assembly in which it is installed, as tabulated below:

	Max Pipe or Conduit Diam In	F Rating Hr	T Rating Hr
1		1 or 2	0+, 1 or 2
1		3 or 4	3 or 4
4		1 or 2	0 .
6		3 or 4	0
12		1 or 2	0

+When copper pipe is used, T Rating is 0 h.

3M COMPANY — CP 25WB+ or FB-3000 WT.

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

System No. W-L-5001

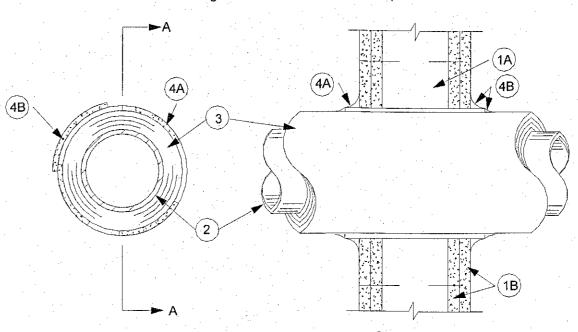

May 19, 2005

F Ratings - and 2 Hr (See Item 1)

L Rating At Ambient - 2 CFM/sq ft

T Ratings - 3/4, 1 and 1-1/2 Hr (See Item 3)

L Rating At 400 F - Less than 1 CFM/sq ft

1. Wall Assembly — The 1 or 2 hr fire-rated gypsum board/stud wall assembly shall be constructed of the materials and in the manner described in the individual U300, U400 or V400 Series Wall or Partition Design in the UL Fire Resistance Directory and shall include the following construction features:

A. Studs — Wall framing may consist of either wood studs or steel channel studs. Wood studs to consist of nom 2 by 4 in. (51 by 102 mm) lumber spaced 16 in. (406 mm) OC with nom 2 by 4 in. (51 by 102 mm) lumber end plates and cross braces. Steel studs to be min 3-5/8 in. (92 mm) wide by 1-3/8 in. (35 mm) deep channels spaced max 24 in. (610 mm) OC.

B. Gypsum Board* — Nom 5/8 in. (16 mm) thick, 4 ft (122 cm) wide with square or tapered edges. The gypsum board type, thickness, number of layers, fastener type and sheet orientation shall be as specified in the individual Design in the UL Fire Resistance Directory. Max diam of

opening is 14-1/2 (368mm) in for wood stud walls and 18 in. (457 mm) for steel stud walls. The hourly F Rating of the firestop system is 1 hr when installed in a 1 hr fire rated wall and 2 hr when installed in a 2 hr fire rated wall.

2. Through Penetrants — One metallic pipe or tubing to be centered within the firestop system. Pipe or tubing to be rigidly supported on both sides of wall assembly. The following types and sizes of metallic pipes or tubing may be used:

A. Steel Pipe — Nom 12 in. (305 mm) diam (or smaller) Schedule 10 (or heavier) steel pipe.

B. Copper Tubing — Nom 6 in. (152 mm) diam (or smaller) Type L (or heavier) copper tubing.

C. Copper Pipe — Nom 6 in. (152 mm) diam (or smaller) Regular (or heavier) copper pipe.

3. Pipe Covering* — Nom 1 or 2 in. (25 or 51 mm) thick hollow cylindrical heavy density (min 3.5 pcf or 56 kg/m3) glass fiber units jacketed on the outside with an all service jacket. Longitudinal joints sealed with metal fasteners or factory-applied self-sealing lap tape. Transverse joints sealed with metal fasteners or with butt strip tape supplied with the product. When nom 1 in. (25 mm) thick pipe covering is used, the annular space between the pipe covering and the circular cutout in the gypsum wallboard layers on each side of the wall shall be min 1/4 in. (6 mm) to max 3/8 in. (10 mm) When nom 2 in. (51 mm) thick pipe covering is used, the annular space between the pipe covering and the circular cutout in the gypsum board layers on each side of the wall shall be min 1/2 in. (13 mm) to max 3/4 in. (19 mm)

See Pipe and Equipment Covering Materials (BRGU) category in Building Materials Directory for names of manufacturers. Any pipe covering material meeting the above specifications and bearing the UL Classification Marking with a Flame Spread Index of 25 or less and a Smoke Developed Index of 50 or less may be used.

The hourly T Rating of the firestop system is 3/4 hr when nom 1 in. (25 mm) thick pipe covering is used. The hourly T Rating of the firestop system is 1 hr and 1-1/2 hr when nom 2 in. (52 mm) thick pipe covering is used with 1 hr and 2 hr fire rated walls, respectively.

4. Firestop System — Installed symmetrically on both sides of wall assembly. The details of the firestop system shall be as follows:

A. Fill, Void or Cavity Materials* — Wrap Strip — Nom 1/4 in. (6 mm) thick intumescent elastomeric material faced on one side with aluminum foil, supplied in 2 in, (51 mm) wide strips, Nom 2 in. (51 mm) wide strip tightly wrapped around pipe covering (foil side out) with seam butted. Wrap strip layer securely bound with steel wire or aluminum foil tape and slid into annular space approx 1-1/4 in. (32 mm) such that approx 3/4 in. (19 mm) of the wrap strip width protrudes from the wall surface. One layer of wrap strip is required when nom 1 in. (25 mm) thick pipe covering is used. Two layers of wrap strip are required when nom 2 in. (51 mm) thick pipe covering is used.

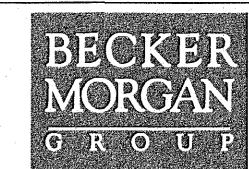

3M COMPANY -- FS-195+

B. Fill, Void or Cavity Materials* — Caulk or Sealant — Min 1/4 in. (6 mm) diam continuous bead applied to the wrap strip/wall interface and to the exposed edge of the wrap strip layer approx 3/4 in. (19 mm) from the wall surface.

3M COMPANY — CP 25WB+, IC 15WB+, FireDam 150+ caulk or FB-3000 WT sealant

* Indicates such products shall bear the UL or cUL Certification Mark for jurisdictions employing the UL or cUL Certification (such as Canada), respectively.

AHLINOTES

- 1. REFER TO SPECIFICATIONS FOR OTHER ACCEPTABLE MANUFACTURERS. FOR UNITS OTHER THAN TRANE, PROVIDE DRAWINGS WHICH SHOW THE UNITS WILL FIT IN THE AVAILABLE SPACE WITH PROPER DUCTWORK AND PIPING CONNECTIONS, AND WITH PROPER SERVICE
- 2. HIGH EFFICIENCY MERV 8 FILTERS SHALL BE PROVIDED AND CHANGED AS NEEDED DURING CONSTRUCTION, FROM UNIT START-UP THROUGH FINAL ACCEPTANCE. AT THE TIME OF OWNER ACCEPTANCE, THE CONTRACTOR SHALL INSTALL A NEW SET OF FILTERS.
- 3. MOTORS SHALL BE HIGH EFFICIENCY.
- MOTORS FOR AHU1, AHU3 AND AHU5 SHALL BE ECM PROGRAMMABLE TYPE. THE MOTOR SHALL BE PREPROGRAMMED IN THE FACTORY TO MEET SPECIFIED AIRFLOW REQUIREMENTS.
- 5. PROVIDE 3HP ULTRA HIGH STATIC MOTOR FOR AHU4.

FAN SCHEDULE NOTES:

- 1. MANUFACTURER: GREENHECK, OR EQUAL BY CARNES, LOREN COOK, PENN BARRY, OR TWIN CITY FAN. REFER TO SPECIFICATION SECTION 233423 FOR MORE DETAILED REQUIREMENTS.
- 2. PROVIDE HANGING VIBRATION ISOLATION FOR INLINE AND CEILING EXHAUST FANS.
- FANS SHALL BE CONTROLLED VIA THE DDC CONTROL SYSTEM
 PROVIDE VARIABLE FREQUENCY DRIVE FOR EF-5, EF6 AND EF7.
- 5. EF-7 AND ITS ASSOCIATED WIRING, CONTROLS, DISCONNECT, DUCTWORK, ETC. ARE PART OF BID ALTERNATE #1.
- FANS SHALL NOT BE SELECTED WITH HIGHER INLET SONES THAN SCHEDULED.

PROVIDE TRANE UNITS AS SCHEDULED OR EQUAL BY OTHER MANUFACTURERS LISTED IN THE SPECIFICATIONS.

PROVIDE UNITS WITH ECONOMIZER INTAKE HOODS AND DAMPERS. MAXIMUM ECONOMIZER VOLUME SHALL MATCH DESIGN

SUPPLY AIR FLOW.

UNIT COOLING CAPACITIES ARE BASED ON 95°F AMBIENT TEMPERATURE.

SUPPLEMENTARY ELECTRIC HEAT ELEMENTS ARE RATED FOR 230V/3 PHASE CURRENT, BUT WILL BE RUNNING ON 208V/3 PHASE CURRENT. THE ELECTRIC HEAT CAPACITY MBH GIVEN HAS BEEN DERATED BY 25% FOR THIS VOLTAGE DIFFERENCE. THE

ELECTRIC HEATING DRY BULB TEMPERATURE RISE ALSO REFLECTS THE DERATING.

* PHP3 AND ITS ASSOCIATED WIRING, CONTROLS, DISCONNECT, DUCTWORK, ETC. ARE PART OF BID ALTERNATE #1.

DUCTLESS NOTES:

1. MITSUBISHI ELECTRIC OR APPROVED EQUALS BY DAIKIN, EMI, SANYO, OR JOHNSON CONTROLS.

HEATING AND COOLING CAPACITIES AT AHRI 210/240 TEST PROVIDE BUILT IN CONDENSATE PUMP FOR INDOOR UNITS.

REFRIGERANT SHALL BE R-410A OR R-134A.

PROVIDE HIGH WATER SWITCH IN THE DRAIN PAN WHICH WILL TURN THE UNIT OFF IF THE DRAIN BECOMES CLOGGED.

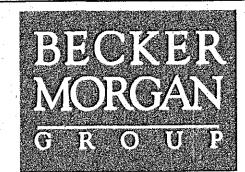

MAINTAIN FILTERS IN UNITS DURING CONSTRUCTION, AT THE TIME OF OWNER ACCEPTANCE, INSTALL NEW FILTERS IF USING DISPOSABLE TYPE, OR CLEAN IF USING PERMANENT TYPE.

INDOOR UNIT IS POWERED BY OUTDOOR UNIT. MOTOR TYPE DC INVERTER DRIVEN.

MECHANICAL SCHEDULES

2018070.01 PROJECT NO: 09/23/2019 DATE: SCALE:

DRAWN BY: JWS PROJ MGR: IS M602

DIRECT DIGITAL CONTROL (DDC) SYSTEM

The DDC system shall be a complete integrated Direct Digital Control (DDC) Building Automation System (BAS). The system shall consist of a high-speed, peer-to-peer network of DDC controllers and a web-based operator interface. The system shall be robust, flexible, expandable, easy to use, and easily accessible.

Provide all labor, materials, special tools, hardware, software, programming, etc. required for the functional turn-key operation of the complete and fully functional Direct Digital Control Building Automation System to accomplish control and monitoring of the HVAC equipment as shown on the drawings and as indicated in the Sequence of Operation and Input/Output Point Schedules.

SEQUENCE OF OPERATION

All schedules and temperature, humidity and CO2 setpoints shall be adjustable by facility personnel from the control panel and remotely located central site. No such parameters, which may need adjustment, may be imbedded in the programming.

Packaged Heat Pump System Control (PHP1 and PHP2) (Tandem Systems)

PHP1 and PHP2 are constant volume packaged heat pump units. The units will operate as a system to serve the Sound Stage. The units will operate in tandem in a lead/lag configuration.

Each unit is equipped with economizer/return air dampers, relief air damper, relief air fan, air filter, cooling/heating DX coil, auxiliary electric heat, and supply air fan.

Run Conditions - Scheduled:

The system shall run according to a user definable time schedule in the following modes:

- Occupied Mode: The unit shall maintain - A 75°F (adj.) cooling setpoint
 - A 70°F (adj.) heating setpoint
 - A 60% RH (adj.) high humidity setpoint
 - A 45% RH (adj.) low humidity setpoint
- Unoccupied Mode (night setback): The unit shall maintain:
- A 80°F (adj.) cooling setpoint
- A 60°F (adj.) heating setpoint
- A 60% RH (adj.) high humidity setpoint
- A 45% RH (adj.) low humidity setpoint

Alarms shall be provided as follows:

- High Space Temp: If the zone temperature is greater than the cooling setpoint by a user definable amount (adj.). Low Space Temp: If the zone temperature is less than the heating setpoint by a user definable amount (adj.).
- High Space Humidity: If the zone humidity is greater than 65% (adj.).

<u>Tandem Sequence:</u>

The program shall be capable of operating the two heat pumps as a single system as follows:

- One of the heat pumps will be designated as the lead unit and one will be designated as the lag unit.
- The units shall be rotated from lead to lag on a scheduled basis.
- The unit designated as the lag unit shall operate in tandem with the lead unit.
- The program shall allow the operation of the lead and lag units at the same time based upon load requirements. The program shall provide the option to run the lead unit fan continuously or cycled with the cooling and heating. The lag unit fan shall be cycled with cooling and heating. The lag unit will operate 1°F above/below the lead units last stage of cooling or heating.

System / Roll-up Door Interlock:

The units shall be interlocked with the roll-up door in the space to prevent them from operating if the door is open.

System Unoccupied Override:

A timed local override control shall allow an occupant to override the schedule and place the system into an occupied mode for an adjustable period of time. At the expiration of this time, control of the system shall automatically return to the schedule.

Emergency Shutdown:

The unit shall shut down and generate an alarm upon receiving an emergency shutdown signal from the fire alarm.

High Static Shutdown:

The unit shall shut down and generate an alarm upon receiving a high static shutdown signal.

System Optimal Start:

The system shall use an optimal start algorithm for morning start-up. This algorithm shall minimize the unoccupied warm-up or cool-down period while still achieving comfort conditions by the start of scheduled occupied period. The start time shall automatically adjust based on changes in outside air temperature, zone temperatures and prior history.

Supply Fan:

The supply fan shall run anytime the unit is commanded to run, unless shutdown on safeties. To prevent short cycling, the supply fan shall have a user definable (adj.) minimum runtime.

Alarms shall be provided as follows:

Supply Fan Failure: Commanded on, but the status is off

Relief Air Fan:

The relief air fan shall operate when its associated heat pump is in the economizer mode and the economizer damper is operating, unless shutdown on safeties. The relief fan shall not energize without its heat pump being in operation. If the heat pump shuts down for any reason, the associated relief fan shall also shut down.

Alarms shall be provided as follows:

Relief Air Fan Failure: Commanded on, but the status is off.

Heat/Cool Changeover:

Automatic heat/cool changeover shall be achieved by controlling the reversing valve according to the space temperature.

Cooling Control:

Upon a rise in space temperature above the active cooling setpoint for 15 seconds, the compressor shall start and the reversing valve shall be energized. When the space temperature falls 1°F below the active cooling setpoint for 15 seconds, the compressor shall stop. The compressor output shall have a 5-minute delay off. The cooling cycle shall be disabled if the fan proof option is enabled and the fan proof is not present.

If more cooling is required than can be provided by the lead unit, the program shall similarly sequence on the lag unit.

The cooling shall be enabled whenever:

- Outside air temperature is greater than 60°F (adj.). AND the economizer is disabled or fully open.
- AND the supply fan status is on.

Heating Control:

Upon a fall in space temperature below the active heating setpoint for 15 seconds, the compressor shall start and the reversing valve shall not energize. If the space temperature continues to fall to 1°F below the active heating setpoint for 10 minutes (adj), the auxiliary electric heat shall start. When the space temperature rises above the active heating setpoint for 15 seconds, the auxiliary heat shall stop. When the space temperature rises to 1°F above the active heating setpoint for 15 seconds, the compressor shall stop and the compressor shall stop and the reversing valve shall be returned to the normal position. During the heat pump heating cycle, the unit's on-board controls shall control the defrost cycle. The compressor output shall have a 5-minute delay off. The heating cycle shall be disabled if the fan proof option is enabled and the fan proof is not present.

If more heating is required than can be provided by the lead unit, the program shall similarly sequence on the lag unit.

The heating shall be enabled whenever:

- Outside air temperature is less than 60°F (adi.). AND the space temperature is below setpoint.
- AND the supply fan status is on.

Damper Control:

The units have economizer outside/return air and relief air dampers.

- The economizer outside and return air dampers shall maintain a minimum adjustable open position during occupied periods to provide minimum OA requirements.
- The remote relief air damper shall be enabled when the unit supply air fan status is proven. The damper shall modulate to maintain space static pressure setpoint of .05 in. H2O (adj.).
- The relief air damper associated with a relief air fan shall be open when the unit is cooling economizing and the relief air fan
- The economizer outside air damper, and relief air dampers shall close and the return air damper shall open when the unit is off. During unoccupied periods including optimized cool-down/warm-up periods, the economizer OA dampers shall be kept closed except when the OA enthalpy is suitable for cooling economizing.
- Economizer Control: If the system is in the cooling mode and the average space temperature becomes greater than one degree below setpoint and the OA enthalpy is less than the economizer enthalpy setpoint (27.5 BTU/lb. of dry air) (adj.) and the outside air temperature is less than the return air temperature, the outside (economizer), and return air dampers shall modulate to provide "free cooling" by mixing outside and return air as necessary to maintain the discharge setpoint. While under economizer control minimum discharge air temperature shall be 52°F.

The economizer outdoor air dampers, and relief air dampers shall close, and the return air damper shall open whenever:

- Mixed air temperature drops below 40°F (adj.)
- OR on loss of supply fan status.

Demand Control Ventilation - Carbon Dioxide (CO2) Control:

When in the occupied mode, the controller shall monitor space CO2 levels. The controller shall modulate the economizer damper open on rising CO2 concentrations, overriding normal damper operation to maintain a CO2 setpoint of 900 ppm (adj.). When under CO2 control, the outside air flow shall not exceed the Max. Design OA CFM.

Alarms shall be provided as follows:

High Zone Carbon Dioxide Concentration: If the highest zone CO2 concentration is greater than 1500 ppm (adj.).

Mixed Air Temperature:

The controller shall monitor the mixed air temperature and use as required for economizer control.

Alarms shall be provided as follows:

High Mixed Air Temp: If the mixed air temperature is greater than 90°F (adi.). Low Mixed Air Temp: If the mixed air temperature is less than 40°F (adj.).

Mixed Air Humidity: The controller shall monitor the mixed air humidity.

Supply Air Temperature:

The controller shall monitor the supply air temperature.

Alarms shall be provided as follows:

High Supply Air Temp: If the supply air temperature is greater than 90°F (adj.). Low Supply Air Temp: If the supply air temperature is less than 45°F (adj.).

Space Air Humidity:

The controller shall monitor the space air humidity.

Alarms shall be provided as follows:

High Space Air Humidity: If the space air humidity is greater than 65% (adj.)

Space Static Pressure Control:

The controller shall measure the space static pressure and use as required for space static pressure reset.

Alarms shall be provided as follows:

High Space Static Pressure: If the space static pressure is .05 (adj.) greater than setpoint.

Low Space Static Pressure: If the space static pressure is .05 (adj.) less than setpoint.

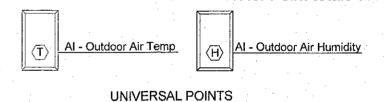

Assistant Director's Box:

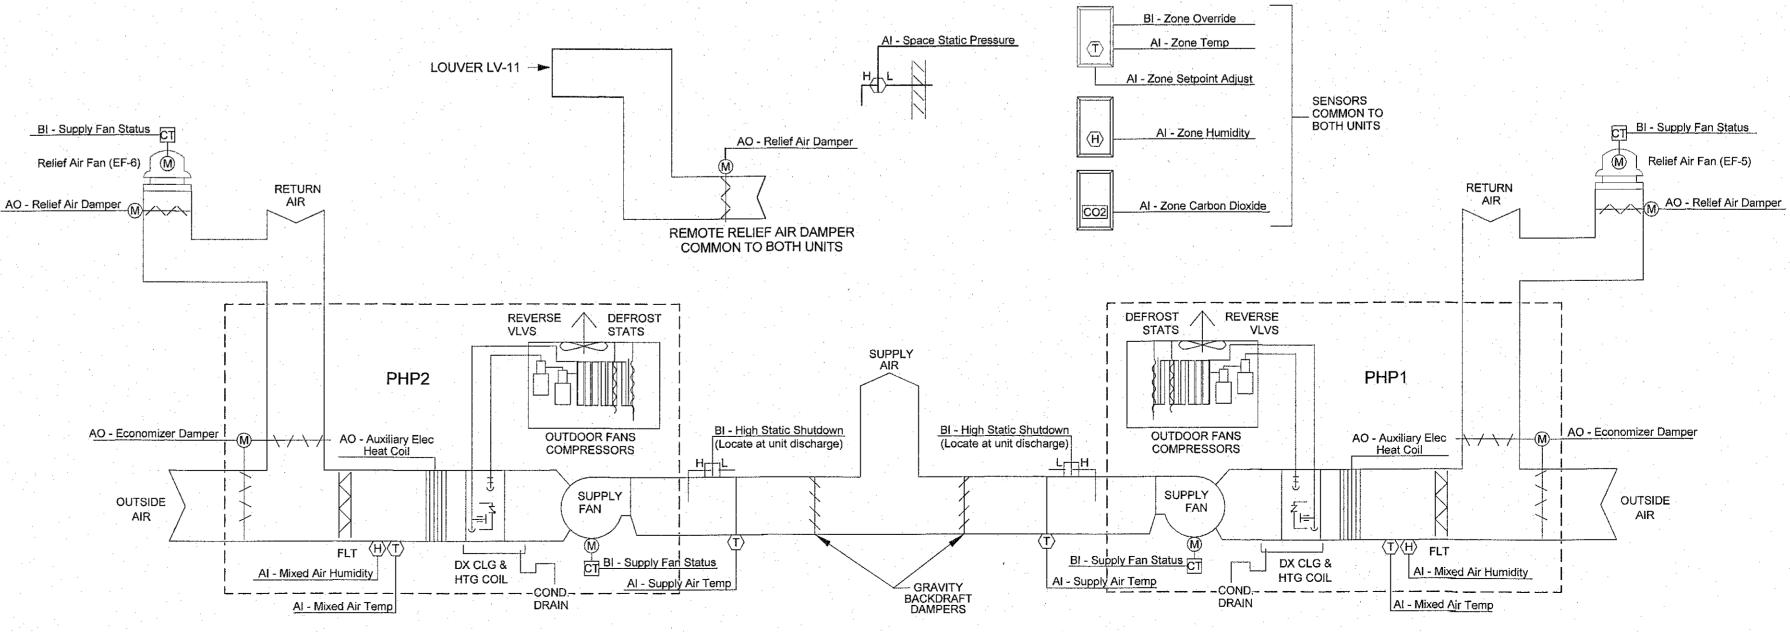

PACKAGED HEAT PUMP SYSTEM CONTROL

The Assistant Director's (AD) Box is a central location in the Sound Stage for controlling the house lights, "Quiet - Recording" lights, and for temporarily shutting off the HVAC system. Switches shall be provided in this box which will tell the BMS to shut off PHP1, PHP2, EF-5, and EF-6. The BMS shall display the status during shut down as "Turned off by AD". If these systems are not manually turned back on after 2 hours (adjustable), the BMS shall register an alarm. If they are not turned on after an additional 2 hours (adjustable), they shall be returned to automatic control.

M603

DRAWN BY: MJS PROJ MGR:

12" = 1'-0"

SCALE:

Packaged Heat Pump System Control (PHP3)

PHP3 is a constant volume packaged heat pump unit. The unit is equipped with economizer/return air dampers, relief air damper, relief air fan, air filter, cooling/heating DX coil, auxiliary electric heat, and supply air fan.

Run Conditions - Scheduled

The system shall run according to a user definable time schedule in the following modes:

- Occupied Mode: The unit shall maintain
- A 75°F (adi.) cooling setpoint
- A 70°F (adj.) heating setpoint
- A 60% RH (adj.) high humidity setpoint
- A 45% RH (adj.) low humidity setpoint
- Unoccupied Mode (night setback): The unit shall maintain:
 - A 80°F (adj.) cooling setpoint
 - A 60°F (adj.) heating setpoint
 - A 60% RH (adj.) high humidity setpoint - A 45% RH (adj.) low humidity setpoint

Alarms shall be provided as follows:

- High Space Temp: If the zone temperature is greater than the cooling setpoint by a user definable amount (adj.).
- Low Space Temp: If the zone temperature is less than the heating setpoint by a user definable amount (adi.).
- High Space Humidity: If the zone humidity is greater than 65% (adj.).

System Unoccupied Override:

A timed local override control shall allow an occupant to override the schedule and place the system into an occupied mode for an adjustable period of time. At the expiration of this time, control of the system shall automatically return to the schedule.

Emergency Shutdown:

The unit shall shut down and generate an alarm upon receiving an emergency shutdown signal from the fire alarm.

High Static Shutdown:

The unit shall shut down and generate an alarm upon receiving a high static shutdown signal.

System Optimal Start:

The system shall use an optimal start algorithm for morning start-up. This algorithm shall minimize the unoccupied warm-up or cool-down period while still achieving comfort conditions by the start of scheduled occupied period. The start time shall automatically adjust based on changes in outside air temperature, zone temperatures and prior history.

The supply fan shall run anytime the unit is commanded to run, unless shutdown on safeties. To prevent short cycling, the supply fan shall have a user definable (adj.) minimum runtime.

Alarms shall be provided as follows:

Supply Fan Failure: Commanded on, but the status is off.

The relief air fan shall operate when the heat pump is in the economizer mode and the economizer damper is operating, unless shutdown on safeties. The relief fan shall not energize without the heat pump being in operation. If the heat pump shuts down for any reason, the relief fan shall also shut down.

Alarms shall be provided as follows:

Relief Air Fan Failure: Commanded on, but the status is off.

Heat/Cool Changeover:

Automatic heat/cool changeover shall be achieved by controlling the reversing valve according to the space temperature.

Cooling Control:

Upon a rise in space temperature above the active cooling setpoint for 15 seconds, the compressor shall start and the reversing valve shall be energized. When the space temperature falls 1°F below the active cooling setpoint for 15 seconds, the compressor shall stop. The compressor output shall have a 5-minute delay off. The cooling cycle shall be disabled if the fan proof option is enabled and the fan proof is not present.

The cooling shall be enabled whenever:

- Outside air temperature is greater than 60°F (adj.).
- AND the economizer is disabled or fully open.
- AND the supply fan status is on.

Heating Control:

Upon a fall in space temperature below the active heating setpoint for 15 seconds, the compressor shall start and the reversing valve shall not energize. If the space temperature continues to fall to 1 °F below the active heating setpoint for 10 minutes (adj), the auxiliary electric heat shall start. When the space temperature rises above the active heating setpoint for 15 seconds, the auxiliary heat shall stop. When the space temperature rises to 1°F above the active heating setpoint for 15 seconds, the compressor shall stop and the compressor shall stop and the reversing valve shall be returned to the normal position. During the heat pump heating cycle, the unit's on-board controls shall control the defrost cycle. The compressor output shall have a 5-minute delay off. The heating cycle shall be disabled if the fan proof option is enabled and the fan proof is not present.

The heating shall be enabled whenever:

- Outside air temperature is less than 60°F (adj.)
- AND the space temperature is below setpoint.
- AND the supply fan status is on.

Damper Control:

The unit has economizer outside/return air and relief air dampers.

economizing and the relief air fan is operating.

- The economizer outside and return air dampers shall maintain a minimum adjustable open position during occupied periods to provide minimum OA requirements.
- The remote relief air damper shall be enabled when the unit supply air fan status is proven. The damper shall modulate to maintain space static pressure setpoint of .05 in. H2O (adj.). The relief air damper associated with a relief air fan shall be open when the unit is cooling
- The economizer outside air damper, and relief air dampers shall close and the return air damper shall open when the unit is off. During unoccupied periods including optimized cooldown/warm-up periods, the economizer OA dampers shall be kept closed except when the OA enthalpy is suitable for cooling economizing.
- Economizer Control: If the system is in the cooling mode and the average space temperature becomes greater than one degree below setpoint and the OA enthalpy is less than the economizer enthalpy setpoint (27.5 BTU/lb. of dry air) (adj.) and the outside air temperature is less than the return air temperature, the outside (economizer), and return air dampers shall modulate to provide "free cooling" by mixing outside and return air as necessary to maintain the discharge setpoint. While under economizer control minimum discharge air temperature shall be 52°F.

The economizer outdoor air dampers, and relief air dampers shall close, and the return air damper shall open whenever:

- Mixed air temperature drops below 40°F (adj.)
- OR on loss of supply fan status.

<u>Demand Control Ventilation - Carbon Dioxide (CO2) Control:</u>

When in the occupied mode, the controller shall monitor space CO2 levels. The controller shall modulate the economizer damper open on rising CO2 concentrations, overriding normal damper operation to maintain a CO2 setpoint of 900 ppm (adj.). When under CO2 control, the outside air flow shall not exceed the Max. Design OA CFM.

Alarms shall be provided as follows:

High Zone Carbon Dioxide Concentration: If the highest zone CO2 concentration is greater than 1500 ppm (adj.).

Mixed Air Temperature:

The controller shall monitor the mixed air temperature and use as required for economizer control.

Alarms shall be provided as follows:

- High Mixed Air Temp: If the mixed air temperature is greater than 90°F (adj.).
- Low Mixed Air Temp: If the mixed air temperature is less than 40°F (adj.).

Mixed Air Humidity:

The controller shall monitor the mixed air humidity.

Supply Air Temperature:

The controller shall monitor the supply air temperature.

Alarms shall be provided as follows:

- High Supply Air Temp: If the supply air temperature is greater than 90°F (adj.).
- Low Supply Air Temp: If the supply air temperature is less than 45°F (adj.).

Space Air Humidity:

The controller shall monitor the space air humidity.

Alarms shall be provided as follows:

High Space Air Humidity: If the space air humidity is greater than 65% (adj.).

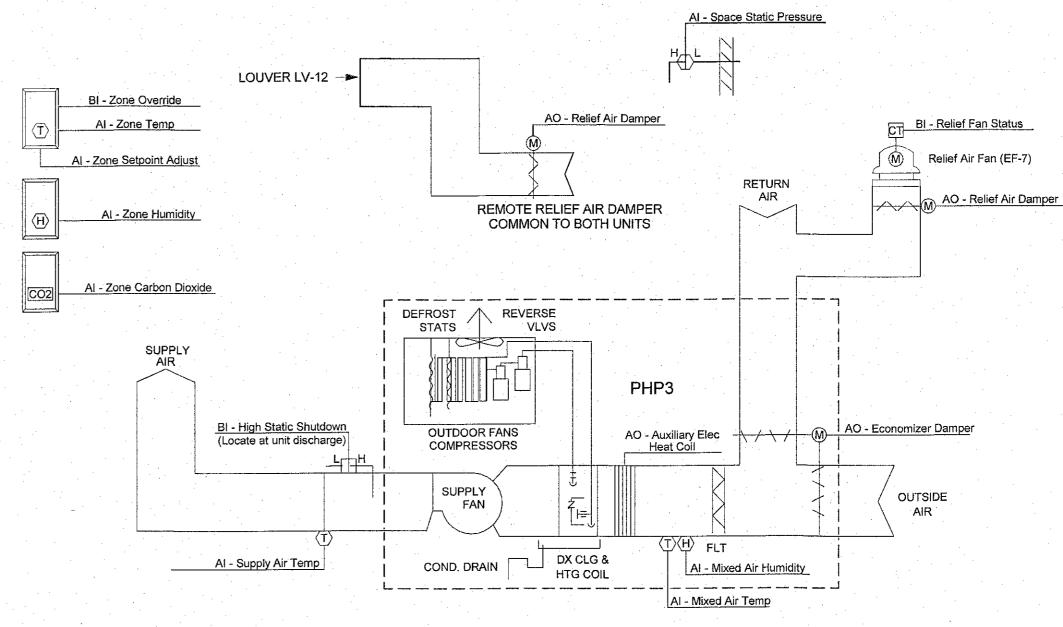

Space Static Pressure Control:

The controller shall measure the space static pressure and use as required for space static pressure

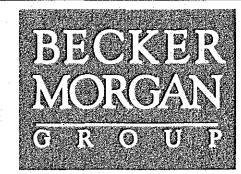

Alarms shall be provided as follows:

- High Space Static Pressure: If the space static pressure is .05 (adj.) greater than setpoint.
- Low Space Static Pressure: If the space static pressure is .05 (adj.) less than setpoint.

Split Heat Pump System Control (AHU4/CU4)

AHU4/CU4 is a constant volume split heat pump system. The system is comprised of the outdoor condensing unit (compressor, fan, and coil), and the indoor air handling unit (economizer/return air dampers, air filter, cooling/heating DX coil, auxiliary electric heat, and supply air fan.

The system is also equipped with a remote relief air fan.

Run Conditions - Scheduled:

The system shall run according to a user definable time schedule in the following modes:

- Occupied Mode: The unit shall maintain
- A 75°F (adj.) cooling setpoint
- A 70°F (adj.) heating setpoint
- A 60% RH (adj.) high humidity setpoint - A 45% RH (adj.) low humidity setpoint
- Unoccupied Mode (night setback): The unit shall maintain:
- A 80°F (adj.) cooling setpoint
- A 60°F (adj.) heating setpoint
- A 60% RH (adj.) high humidity setpoint
- A 45% RH (adj.) low humidity setpoint

Alarms shall be provided as follows:

- High Space Temp: If the zone temperature is greater than the cooling setpoint by a user definable amount (adi.).
- Low Space Temp: If the zone temperature is less than the heating setpoint by a user definable
- High Space Humidity: If the zone humidity is greater than 65% (adj.).

System Unoccupied Override:

A timed local override control shall allow an occupant to override the schedule and place the system into an occupied mode for an adjustable period of time. At the expiration of this time, control of the system shall automatically return to the schedule.

Emergency Shutdown:

The unit shall shut down and generate an alarm upon receiving an emergency shutdown signal from the fire alarm.

The system shall use an optimal start algorithm for morning start-up. This algorithm shall minimize the unoccupied warm-up or cool-down period while still achieving comfort conditions by the start of scheduled occupied period. The start time shall automatically adjust based on changes in outside air temperature, zone temperatures and prior history.

The supply fan shall run anytime the unit is commanded to run, unless shutdown on safeties. To prevent short cycling, the supply fan shall have a user definable (adj.) minimum runtime.

Alarms shall be provided as follows:

Supply Fan Failure: Commanded on, but the status is off.

Relief Air Fan:

The relief air fan shall operate when the heat pump is in the economizer mode and the economizer damper is operating, unless shutdown on safeties. The relief fan shall not energize without the heat pump being in operation. If the heat pump shuts down for any reason, the relief fan shall also shut

Alarms shall be provided as follows:

Relief Air Fan Failure: Commanded on, but the status is off.

Heat/Cool Changeover:

Automatic heat/cool changeover shall be achieved by controlling the reversing valve according to the space temperature.

Cooling Control:

Upon a rise in space temperature above the active cooling setpoint for 15 seconds, the compressor shall start and the reversing valve shall be energized. When the space temperature falls 1°F below the active cooling setpoint for 15 seconds, the compressor shall stop. The compressor output shall have a 5-minute delay off. The cooling cycle shall be disabled if the fan proof option is enabled and the fan proof is not present.

The cooling shall be enabled whenever:

- Outside air temperature is greater than 60°F (adj.).
- AND the economizer is disabled or fully open.
- AND the supply fan status is on.

Heating Control:

Upon a fall in space temperature below the active heating setpoint for 15 seconds, the compressor shall start and the reversing valve shall not energize. If the space temperature continues to fall to 1°F below the active heating setpoint for 10 minutes (adj), the auxiliary electric heat shall start. When the space temperature rises above the active heating setpoint for 15 seconds, the auxiliary heat shall stop. When the space temperature rises to 1°F above the active heating setpoint for 15 seconds, the compressor shall stop and the compressor shall stop and the reversing valve shall be returned to the normal position. During the heat pump heating cycle, the unit's on-board controls shall control the defrost cycle. The compressor output shall have a 5-minute delay off. The heating cycle shall be disabled if the fan proof option is enabled and the fan proof is not present.

The heating shall be enabled whenever:

- Outside air temperature is less than 60°F (adj.).
- AND the space temperature is below setpoint.
- AND the supply fan status is on.

Damper Control:

The unit has economizer outside/return air and relief air dampers.

- The economizer outside and return air dampers shall maintain a minimum adjustable open position during occupied periods to provide minimum OA requirements.
- The relief air damper shall be open when the unit is cooling economizing.
- The economizer outside air damper, and relief air damper shall close and the return air damper shall open when the unit is off. During unoccupied periods including optimized cool-down/warmup periods, the economizer OA dampers shall be kept closed except when the OA enthalpy is suitable for cooling economizing.
- Economizer Control: If the system is in the cooling mode and the average space temperature becomes greater than one degree below setpoint and the OA enthalpy is less than the economizer enthalpy setpoint (27.5 BTU/lb. of dry air) (adj.) and the outside air temperature is less than the return air temperature, the outside (economizer), and return air dampers shall modulate to provide "free cooling" by mixing outside and return air as necessary to maintain the discharge setpoint. While under economizer control minimum discharge air temperature shall be

The economizer outdoor air dampers, and relief air damper shall close, and the return air damper shall open whenever:

- Mixed air temperature drops below 40°F (adj.)
- OR on loss of supply fan status.

Mixed Air Temperature:

The controller shall monitor the mixed air temperature and use as required for economizer control.

Alarms shall be provided as follows:

- High Mixed Air Temp: If the mixed air temperature is greater than 90°F (adj.).
- Low Mixed Air Temp: If the mixed air temperature is less than 40°F (adj.).

Mixed Air Humidity:

The controller shall monitor the mixed air humidity.

Supply Air Temperature:

The controller shall monitor the supply air temperature.

Alarms shall be provided as follows:

- High Supply Air Temp: If the supply air temperature is greater than 90°F (adj.).
- Low Supply Air Temp: If the supply air temperature is less than 45°F (adj.).

Water Flow Meter

Water Meter:

The controller shall monitor the water meter for water consumption on a continual basis. These values shall be made available to the system at all times.

Alarm shall be generated as follows:

Meter Failure: Sensor reading indicates a loss of signal from the water meter.

Peak Demand History:

The controller shall monitor and record the peak (high and low) demand readings from the water meter. These readings shall be recorded on a daily, month-to-date, and year-to-date basis.

Usage History:

The controller shall monitor and record water meter readings so as to provide a water consumption history. Usage readings shall be recorded on a daily, month-to-date, and year-to-date basis.

Split System Heat Pump Control (ODU1 / IDU1, ODU2 / IDU2, IDU3 & IDU4)

The split heat pump systems consist of an outdoor condensing unit and associated indoor terminal units. ODU1 has one indoor unit (IDU1), and ODU2 has three associated indoor units (IDU2, IDU3 & IDU4).

The heat pump systems will be scheduled through the DDC system, and controlled locally by thermostats furnished with the systems from the manufacturer.

Run Conditions - Scheduled:

The system shall run according to a user definable time schedule.

A timed local override control shall allow an occupant to override the schedule and place the system into an occupied mode for an adjustable period of time. At the expiration of this time, control of the system shall automatically return to the schedule.

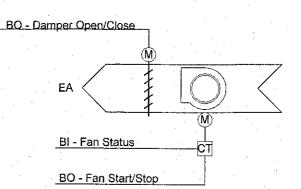

Zone Temperature:

The DDC System shall monitor the zone temperature.

Alarms shall be provided as follows:

High Zone Temperature: If the zone temperature is greater than the cooling setpoint by a user definable amount (adi.). Low Zone Temperature: If the zone temperature is less than the heating setpoint by a user definable amount (adj.).

Run Conditions - Scheduled: The fan shall run according to a user definable schedule. EF-1 schedule shall match AHU-1 schedule. EF-2 schedule shall match AHU-4 schedule. EF-4 schedule shall match AHU-5 schedule.

The fan shall have a user definable (adj.) minimum runtime.

Fan Status:

The controller shall monitor the fan status.

Alarms shall be provided as follows:

Fan Failure: Commanded on, but the status is off. Fan in Hand: Commanded off, but the status is on.

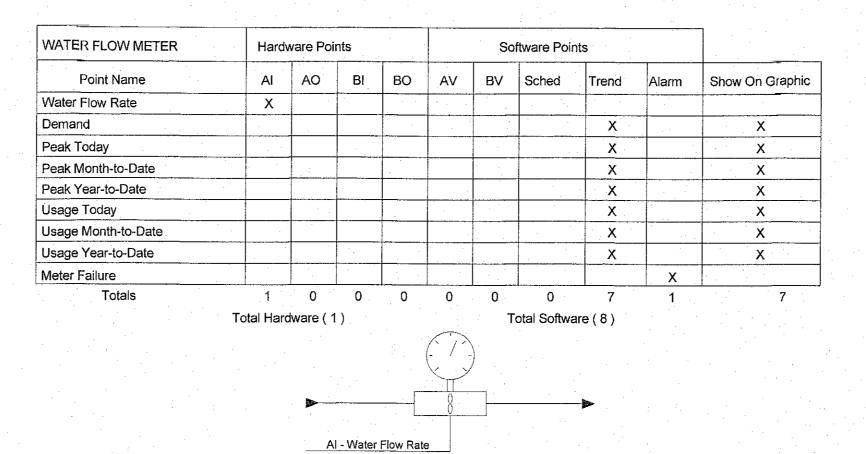

Fan Runtime Exceeded: Fan status runtime exceeds a user definable limit (adj.).

The damper shall open whenever the fan is called to operate.

<u>Damper Status:</u>

The controller shall monitor the damper position.

SPLIT HEAT PUMP SYSTEM CONTROL (TYPICAL OF AHU1/CU1, AHU-3/CU3 & AHU5/CU5)

Split Heat Pump System Control (Typical of AHU1/CU1, AHU3/CU3 and AHU5/CU5)

AHU1/CU1, AHU3/CU3 and AHU5/CU5 are constant volume split heat pump systems. The systems are comprised of an outdoor condensing unit (compressor, fan, and coil), and an indoor air handling unit, return air dampers, air filter, cooling/heating DX coil, auxiliary electric heat, and supply air fan.

Run Conditions - Scheduled:

The system shall run according to a user definable time schedule in the following modes:

Occupied Mode: The unit shall maintain

- A 75°F (adj.) cooling setpoint

- A 70°F (adj.) heating setpoint

- A 60% RH (adj.) high humidity setpoint - A 45% RH (adj.) low humidity setpoint

Unoccupied Mode (night setback): The unit shall maintain:

- A 80°F (adj.) cooling setpoint

- A 60°F (adj.) heating setpoint

- A 60% RH (adj.) high humidity setpoint - A 45% RH (adj.) low humidity setpoint

Alarms shall be provided as follows:

High Space Temp: If the zone temperature is greater than the cooling setpoint by a user definable amount (adj.).

Low Space Temp: If the zone temperature is less than the heating setpoint by a user

definable amount (adj.). High Space Humidity: If the zone humidity is greater than 65% (adj.).

System Unoccupied Override:

A timed local override control shall allow an occupant to override the schedule and place the system into an occupied mode for an adjustable period of time. At the expiration of this time, control of the system shall automatically return to the schedule.

Emergency Shutdown:

The unit shall shut down and generate an alarm upon receiving an emergency shutdown signal from the fire alarm.

System Optimal Start:

The system shall use an optimal start algorithm for morning start-up. This algorithm shall minimize the unoccupied warm-up or cool-down period while still achieving comfort conditions by the start of scheduled occupied period. The start time shall automatically adjust based on changes in outside air temperature, zone temperatures and prior history.

The supply fan shall run anytime the unit is commanded to run, unless shutdown on safeties. To prevent short cycling, the supply fan shall have a user definable (adj.) minimum runtime.

Alarms shall be provided as follows:

Supply Fan Failure: Commanded on, but the status is off.

Heat/Cool Changeover:

Automatic heat/cool changeover shall be achieved by controlling the reversing valve according to the space temperature.

Cooling Control:

Upon a rise in space temperature above the active cooling setpoint for 15 seconds, the compressor shall start and the reversing valve shall be energized. When the space temperature falls 1°F below the active cooling setpoint for 15 seconds, the compressor shall stop. The compressor output shall have a 5-minute delay off. The cooling cycle shall be disabled if the fan proof option is enabled and the fan proof is not present.

The cooling shall be enabled whenever:

- Outside air temperature is greater than 60°F (adj.).
- AND the economizer is disabled or fully open. AND the supply fan status is on.

Heating Control:

Upon a fall in space temperature below the active heating setpoint for 15 seconds, the compressor shall start and the reversing valve shall not energize. If the space temperature continues to fall to 1°F below the active heating setpoint for 15 seconds, the auxiliary electric heat shall start. When the space temperature rises above the active heating setpoint for 15 seconds, the auxiliary heat shall stop. When the space temperature rises to 1°F above the active heating setpoint for 15 seconds, the compressor shall stop and the compressor shall stop and the reversing valve shall be returned to the normal position. During the heat pump heating cycle, the unit's on-board controls shall control the defrost cycle. The compressor output shall have a 5minute delay off. The heating cycle shall be disabled if the fan proof option is enabled and the fan proof is not present.

The heating shall be enabled whenever:

- Outside air temperature is less than 60°F (adj.).
- AND the space temperature is below setpoint. AND the supply fan status is on.

<u>Damper Control</u>:

The units have an outside air damper.

- The outside air damper shall maintain a minimum adjustable open position during occupied periods to provide minimum OA requirements.
- The outside air damper shall close when the unit is off.
- During unoccupied periods including optimized cool-down/warm-up periods, the OA damper shall be kept closed.

Supply Air Temperature:

The controller shall monitor the supply air temperature.

Alarms shall be provided as follows:

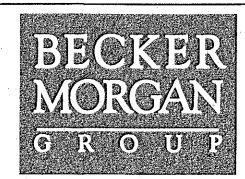

High Supply Air Temp: If the supply air temperature is greater than 90°F (adj.). Low Supply Air Temp: If the supply air temperature is less than 45°F (adj.).

Space Air Humidity:

The controller shall monitor the space air humidity.

Alarms shall be provided as follows:

High Space Air Humidity: If the space air humidity is greater than 65% (adj.).
